Q1. What is Machine learning?

Ans) Machine learning is a field of artificial intelligence that enables computers to learn from data and make predictions without being explicitly programmed.

Q2. What is overfitting?

Ans) Overfitting occurs when a model learns the training data too well and performs poorly on new unseen data.

Q3. What is a decision tree?

Ans) A decision tree is a supervised learning algorithm used for classification and regression that splits data into branches based on feature values.
